Growers and Shippers — *High Quality Vegetable Plants*

Cabbage *Tomato* *Pepper* *Onion*

Pembroke, Georgia

Our plants will produce vegetables three weeks earlier than your home grown plants, because our Cabbage and Onion Plants will stand a temperature of 30 degrees above, without any injury so can be set in the fields from 15 to 20 days earlier than hot-bed plants. Our plants are already toughened to the weather, having been grown in open fields all winter. The plants may not grow any for a few days after they are set out, but you may be assured that the plants are taking on a new root system.

For you will find our tough Frost-Proof Plants are perfectly at home in low temperature, while tender green plants will be killed outright.

Furthermore, our plants have a very strong root system, because they have been growing slowly through our mild winter here, a root system that is impossible on quick growing indoor tender plants.

The officials of the Department of Entomology of the State of Georgia are making a sincere and effective effort to control the diseases. Our Georgia plants acreage is completely under their supervision. We are following both spirit and the letter of their instrucion and their rules, which this year includes winter disinfection of the seed with bichloride of mercury, it being recently shown that collar rot organism can be present on the surface of the seed, even though it had been previously disinfected at the time of the harvest. We want to congratulate our State Board of Entomology officials in this new discovery.

Our plants are being grown from the very best certified seed that money can buy. Plant with confidence, and harvest with a profit. Use Sims Plants.

We will have 500 acres in certified tomatoo plants which insures you of receiving plants, if weather will permit us to have them. We will have 100 acres in Cabbage, Egg Plants, Sweet Peppers Onion Plants.

We Give No Warranty, Either Expressed or Implied, As To Description, Quality, Productiveness, or Any Other Matter of Plants or Seeds We Send Out, And Will Not Be In Any Way Responsible for the Crop. All Quotations Subject To Confirmation.

FROST-PROOF CABBAGE PLANTS

All our cabbage plants are open field grown, in weather that sometimes reaches a temperature of below freezing.

We have shipped cabbage plants to every State in the Union. They are not an experiment, but a profitable investment for the gardener and truck grower.

We will only have the spring grown cabbage plants this season, which insures you of receiving fresh, hardy, young plants, well rooted.

PLANT WITH CONFIDENCE, HARVEST WITH PROFIT—USE SIMS PLANTS

All of our plants are selected and pulled singly by hand, and not pulled in handfulls with trash and weeds. We are as careful as you would be pulling your own bed.

WHY SOUTHERN GROWN TOMATO PLANTS HAVE BECOME SO POPULAR

1. Treating seed to destroy disease spores.
2. Selecting of soil free from tomato diseases.
3. Fertilizer recommendations on the basis of soil tests.
4. Better machinery for seeding and cultivating.
5. Thorough spraying with Bordeaux Mixture, using high pressure equipment.
6. Improved methods of pulling, sorting and packing.
7. Packing roots of plants in a moisture carrier such as Peat Moss, wrapping with paper and packing in small containers to avoid heating.
8. Inspection and certification by the Georgia State Dept. of Entomology.
9. Pulling, packing and shipping supervised by field men of long experience.

Georgia certified grown tomato plants are generally freer from diseases than plants grown in hotbeds, cold frames and open fields in the north and are usually preferred to northern grown plants for the following reasons;

1. Cheaper than hotbed plants.
2. Earlier than plants grown in hotbeds.
3. Heavier and tougher in stems and leaves than hotbed plants; therefore more resistant to insects, winds and low temperature.
4. Less re-planting necessary.

Place your plant growing with us and save money, time and worry.

Practically every ten ton winner of tomatoes in New Jersey used Georgia certified tomato plants.

Sometimes when our plants arrive they will look yellow, but do not jump to the conclusion that they will die; often plants will turn yellow in over-crowded express cars where they do not get the proper ventilation.

Take them out of the crates at once and trench them or set in the field and they will come to the natural color in a few days. As long as they have a green bud they will live, if properly set.

SIMS CERTIFIED TOMATO PLANTS

READY APRIL 25th

The purchaser of any plants is interested in the crop which that plant will produce when planted. Good plants produce good crops, and good crops in return make satisfied customers. Our best means of advertising are by our satisfied customers. A successful plant grower selling to growers must have good plants, since farmers have a right to expect good crops.

With hardy, field grown plants, you can have ripe tomatoes two or three weeks earlier than with hot-bed plants. A market gardener who can put ripe tomatoes on the market two or three weeks earlier than his competitor has doubled his profits.

We grow all our tomato plants in the open fields. There they grow very slowly and very tough. This age causes them to begin to fruit immediately after they start growing in your fields.

We grow all of our tomato plants from certified seed, on land that has been inspected by our State Department of Entomology.

We ship tomato plants in carload lots to the cat[illegible]ern and Eastern States. This should prove that we have the very best tomato plants that can be had at an[illegible]00,000 plants were shipped from our farms last season. We must have the best.

You can readily see that with all our careful selection of seed, selection of plants, and proper packing, one can hardly expect to get any better plants than Sims'. All we ask of you is to try Sims' Plants in a test with the tomato plants you are now using. We would be very pleased to add your name to our long list of satisfied customers all over the United States.

MASTER MARGLOBE TOMATO PLANTS. The finest strain of Marglobe in existence, judging from trials that have been made with them. Our seeds were bought direct from the growers. These seed have been certified by the State of New Jersey Department of Agriculture. They have been especially bred to obtain nearly 100 per cent of perfectly shaped fruits, slightly deeper from stem to blossom than it is thick from side to side. The interior has exceptionally small seed cavities, the fruit is unusually heavy and firm. It has shown itself to be some 40 per cent more productive than other strains.

Place your order in advance of shipment if possible; this will enable us to make shipment as near your date as the weather will permit.

TERMS: Net cash with order. Remit preferably by Post Office or Express Money Order, payable to Sims Plant Co., Inc.
